Descrição

1. **Value:** User authentication in the online store is important so customers can safely register on the platform and place orders. This functionality aims to unify the access flow to the website, allowing the user to register or log in to the online store.

2. User Narrative:

As a user,

I want to access the user login page

To view online store login, registration, and password reset options

3. Requirements:

- User: Client

- Interfaces: See attached UI/UX document
- Data:
 - Creation of database/tables to store information about registered customers
 - Creation of API for integration with front-end and created database
 - Creation of a login screen to allow the user to access the login page and user registration page
- Platform/Environment:
 - Web/ Web Mobile
 - Environments and pipelines must be configured for development, user approval, QA approval, and production.
- Acceptance Criteria:
 - Users must view the form to log in and enter the online store
 - The user should see a button to access the system registration screen
 - The user should see a button to access the 'I forgot my password' screen
